CSE 304
SQL Online – 2
Set B

1) Find employee id and salary of all employees except those employees who get minimum or maximum salary in each department.

2) Find maximum salary in each department *without using any aggregate function*. Print maximum salary and department id. Sort the output according to department id.

3) Find first name, hire date, salary and department of first three (03) employees in each department.

4) Find employee name and manager id of those employees who work under more than one manager. *You cannot use Join in the main query.*

5) Find first name, hire date, department name and manager id of employees who joined last among the employees working under the same manager.
